# **Operating Principle**

Flo-tech's portable hydraulic testers simultaneously measure the flow rate, temperature, pressure and, optionally, power of hydraulic fluid. Designed for testing pumps, valves, cylinders, motors, hydrostatic or power shift transmissions, and power steering systems in both mobile and stationary applications, these compact units utilize turbine flow meter technology.

**Flow:** As fluid passes through the tester, it turns the turbine rotor. As each turbine blade passes the magnetic pick-up, an electrical signal is generated. This frequency signal is proportional to the flow rate and is transmitted to the tester's electronics for display on a PC screen or the front panel LCD of the tester's electronic case.

**Temperature:** All testers contain an internal temperature sensor for measuring the temperature of the fluid as it passes through the flow meter body.

**Pressure:** Pressure is provided in either analog or digital format, depending on the model of the tester. PFM6 and PFM6BD testers are equipped with helical type pressure gauges, while the PFM8 tester includes a silicon strain gauge pressure sensor and the Flo-Check USB tester utilizes a piezoelectric pressure sensor.

**Power:** Power measurements are derived from the product of flow and pressure. The Flo-Check USB and the PFM8 are designed to calculate this measurement and display the results in either horsepower or kilowatts. When using the PFM6 or PFM6BD, power can be calculated using the following formulas:

$$H.P. = \frac{GPM \times PSI}{1714} \qquad H.P. = \frac{LPM \times Bar}{447.4}$$
$$kW = \frac{LPM \times Bar}{600}$$

Designed for both ease of operation and safety, all testers feature loading valves with fingertip control and pressure surge protection.

# Flo-Check<sup>®</sup> USB Hydraulic System Analyzer

# Simultaneously Measures Flow, Pressure and Temperature

- Flow accuracy ±1% of reading @ 32 cSt
- Field selectable US or metric readings
- High and low set point alarms for flow, pressure and temperature
- Captures pressure spikes up to 10,000 PSI (0.2 milliseconds duration)
- Exports saved data to Microsoft Excel<sup>®</sup> and other spreadsheet programs
- USB powered
- · Easy to use, plug and play
- Calculates hydraulic power
- · Select continuous monitoring or capture data manually
- · Logs up to 12 hours
- · Records alarm history

The Flo-Check Hydraulic System Analyzer can be used as a stationary or portable tester for both industrial and mobile hydraulic system diagnostics, and analysis of the prognostic health of a hydraulic system. It features flow, pressure and temperature sensors that are monitored by a data acquisition module. This module records the operating parameters of the system and transfers them to the user's laptop via the USB port.

The custom software utility is a Windows<sup>®</sup>-based application which is compatible with Windows Vista<sup>®</sup>, Windows XP, Windows 2000, and Windows 7. This intuitive software configures the displayed information into user-selected engineering units and provides real-time graphics with instantaneous readings and trends for all three measurement parameters. The software also permits the data to be saved for export into a spreadsheet program.

The Hydraulic System Analyzer is powered through the USB port of a PC, making it easy to set up and ideal for portable applications. Interfaced to the PC application, the Hydraulic Analyzer offers a straightforward method of monitoring system parameters complete with data acquisition.

# Flo-Check<sup>®</sup> USB Hydraulic System Analyzer

Simultaneously Measures Flow, Pressure and Temperature

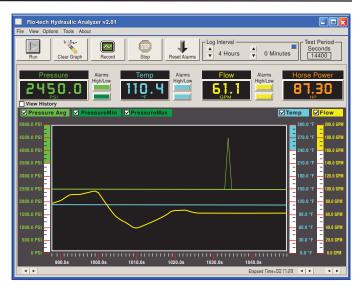

#### SOFTWARE

The Flo-tech Analyzer software provides a real-time graphical and digital interface for monitoring and/or recording pressure, temperature and flow rate parameters from the Hydraulic Analyzer. In addition to the graphical and digital displays, the main screen also consists of a menu bar, buttons with common functions and alarm indicators.

The software offers the following options:

- View real time pressure, temperature, flow rate and power measurements
- · Record all measurements to a file
- Choice of recording all measurement points or capturing points manually
- · Selection of all measurement units, US or metric
- · Ability to adjust display of graph data
- High/Low alarm indicators set by the operator

All measurements taken can be saved once per second to a comma separated value (.csv) file for export into a spreadsheet program. For example, recording for 2 minutes would yield 120 points of data. Even though data points are only recorded once per second, pressure spikes and dips are captured by recording the maximum or minimum pressure during each measurement period. Therefore, the precise shape of the pressure spike is not recorded but its amplitude and the time it occurred are both recorded.

Measurement (over a 1 second time period)	Color Indication	Alarm Indication	Digital Indication	Graphical Display	Record to File
Average Pressure	Green	•	•	•	•
Minimum Pressure	Dark Green			•	•
Maximum Pressure	Dark Green			•	•
Average Temperature	Blue	•	•	•	•
Average Flow Rate	Yellow	•	•	•	•
Average Power	Orange		•		•

### Graphs

The graph on the main screen contains more than 60 points of data. Previous data points are saved in memory and can be viewed at any time. Adjustments can be made to optimize data that is displayed by hiding individual graph plots, adjusting the scale of each plot or adding horizontal gridlines to the graph.

#### Alarms

There are three sets of High/Low alarm indicators on the main screen which monitor pressure, temperature and flow rate. Alarm indicators flash if the current system measurements exceed the alarm limits set by the operator and continue to flash when the current system measurements return to normal to alert the operator that an alarm condition occurred. Alarms must be reset manually to acknowledge the alarm condition.

#### ORDERING INFORMATION

MODEL NUMBER <sup>1</sup>	NOMINAL PORT SIZE	FLOW RANGE
F7160	SAE 16	3 - 85 GPM

# **PFM6 Digital Portable Hydraulic Tester**

Simultaneously Measures Flow, Pressure and Temperature

- Five flow ranges
- Large 3-1/2 digit LCD for flow and temperature
- Helical tube pressure gauge
- One toggle switch to control power and select flow and temperature
- Loading valve with fingertip control of pressure
- Platinum resistance temperature sensor
- Pressure surge protection with internal pressure relief
- Turbine flow sensor provides fast response
- Available with SAE or BSPP ports
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy ±1% of full scale
- Repeatability ±0.2%

The PFM6 Series is a compact, lightweight portable tester designed for fast diagnostic troubleshooting of all types of mobile or stationary hydraulic systems and components. These self-contained testers feature laboratory accuracy and provide flow, pressure and temperature measurements simultaneously from one point.

Simple operation includes a toggle switch to display either flow or temperature readings and a loading valve that operates with fingertip control. The dual scale helical tube pressure gauge offers pulsation dampening and high overpressure capacity. For safe operation, all testers include an internal pressure relief system.

# **PFM6BD Bi-Directional Hydraulic Tester**

Simultaneously Measures Flow, Pressure and Temperature

- Bi-directional in-line testing capabilities in three flow ranges
- Large 3-1/2 digit LCD for flow and temperature
- Helical tube pressure gauge
- One toggle switch to control power and select flow and temperature
- Loading valve with fingertip control of pressure
- Platinum resistance temperature sensor
- Pressure surge protection with internal pressure relief
- Turbine flow sensor provides fast response
- SAE ports
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy ±1% of full scale
- Repeatability ±0.2%

The PFM6BD Series includes all the features of the standard PFM6 Series with the added benefit of bi-directional flow measurement. Designed for fast diagnostic troubleshooting of all types of mobile or stationary hydraulic systems and components, these compact testers offer laboratory accuracy and provide flow, pressure and temperature measurements simultaneously from one point.

# **PFM8 Digital Hydraulic Tester & Dynamometer**

Simultaneously Measures Flow, Pressure, Power and Temperature

- Five flow ranges
- Front panel selectable US or metric readings
- Dynamometer reads power (HP & kW) directly
- 3-1/2 digit LCDs for digital display of flow, temperature, pressure and power
- Large easy-to-use membrane switch
- · Loading valve with fingertip control of pressure
- Silicon strain gauge pressure sensor
- Platinum resistance temperature sensor
- Pressure surge protection with internal pressure relief
- Turbine flow sensor provides fast response
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy ±1% of full scale
- Repeatability ±0.2%

The all digital PFM8 Series combines a compact, lightweight hydraulic tester and a dynamometer in one unit. Designed for fast diagnostic troubleshooting of all types of hydraulic systems and components, including engine-pump combinations. These testers make all flow, temperature, pressure and power measurements from one point. A bonus feature of this series is the capability to switch from US to metric units of measure in the field.

Each tester utilizes two digital displays, one for flow and temperature and a second display for pressure and power. Simple operation includes a large format membrane switch for on/off control and selection of units of measure to be displayed. A loading valve with fingertip control and an internal pressure relief system are standard features.

# Sensor Array with Load Valve

# Simultaneously Measures Flow, Pressure and Temperature

- Four flow ranges
- Analog (4-20 mA or 0-5 VDC) or pulse output for flow rate
- Silicon strain gauge pressure sensor with 4-20 mA output
- Platinum resistance temperature sensor with 4-20 mA output
- Loading valve with fingertip control of pressure
- Pressure surge protection
- Turbine flow sensor provides fast response
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Flow accuracy ±1% of reading @ 32 cSt
- Repeatability ±0.2%

The Sensor Array is used for diagnostic evaluation of hydraulic motors, pumps, valves, hydrostatic drives and cylinders. When performed as part of a routine preventative maintenance program, catastrophic or untimely repairs are minimized. All that is required is to make quick and easy fluid line connections between the sensing array and appropriate locations in the hydraulic circuit. The load valve is used to create a restriction so that a relief valve setting or internal leakage of a valve or hydraulic cylinder can be determined. The efficiency of a hydraulic pump or motor can be similarly established and compared to factory specifications.

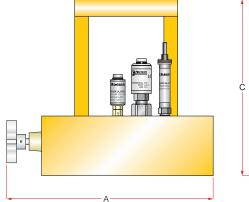

## SPECIFICATIONS

# Flow vs Pressure Drop Charts

Flo-Check USB, PFM Series and F6100 Sensor Arrays

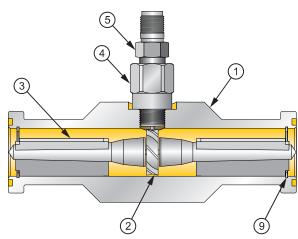

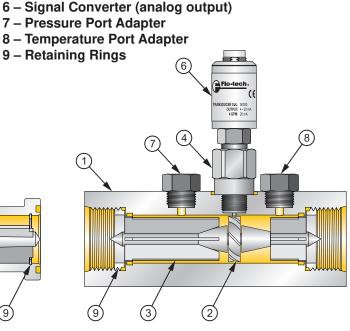

**Turbine Flow Sensors** 

**General Design Features** 

- 1 Housing
- 2 Turbine Rotor
- 3 Rotor Supports
- 4 Lock Nut
- 5 Magnetic Pick-up (frequency output)

# **Operating Principle**

Turbine flow sensors measure the flow rate of hydraulic fluid and compatible liquids. As fluid flows through the sensor it turns the turbine rotor, and as the turbine blades pass the magnetic pick-up a frequency signal is generated. This frequency signal is proportional to the flow rate and can be transmitted to Flo-tech's digital displays or converted to an analog output. Optional sensors allow measurement of pressure and temperature.

**Rugged Construction:** Flow sensors are constructed of anodized aluminum and Stressproof<sup>®</sup> steel with SAE; BSPP; Code 61; and Code 62, 4-bolt flanged ports. The flow sensors have a fluid temperature range of -4 to +300 °F, and are available in pressure ratings up to 6000 PSI.

**Flow Straighteners:** While flow straighteners are manufactured into each sensor, it is recommended that at least 10 port diameters of upstream pipe with no obstructions to the flow sensor and at least 5 port diameters downstream pipe be provided to obtain laminar flow.

**Filtration:** All applications should be filtered to at least 40 micron. Placing the flow sensor at a higher elevation in the system will avoid collection of debris, sediment, and dirt in the sensor.

**Bi-directional flow capability:** Turbine flow sensors are inherently bi-directional, as the turbine will function normally in reverse condition. Flo-tech does not guarantee accuracy in reverse flow. However, it is generally in the range of  $\pm 1.5\%$  to  $\pm 2\%$  full scale. If required, a reverse flow calibration is optional.

**Accuracy:** The flow sensors have a forward flow accuracy of  $\pm 1\%$  full scale while monitoring hydraulic liquids with viscosity and specific gravity similar to factory calibrated fluids. Flow sensors that include the Intelligent Frequency Converter (IFC) are capable of even greater accuracy.

**Repeatability:** Flow sensor repeatability is within ±0.2%. This is particularly important in cyclical applications which require consistent readings.

**Linearization:** When used with the Intelligent Frequency Converter (IFC) and/or Flo-tech digital displays, accuracy can be improved by up to 4 times through the linearization of 10 points of flow data.

**Calibration:** Flow sensors are calibrated with 0.876 specific gravity, 150 SUS (32 cSt) hydraulic oil, irrespective of final fluid use. Three points of calibration data are provided with each turbine flow sensor. Optional 5- and 10-point calibration certification is also available.

**Viscosity:** The functional range of the turbine flow sensors is approximately 25 to 500 SUS (2 to 110 cSt).

# Activa<sup>™</sup> Sensor Array

# Simultaneously Measures Flow, Pressure and Temperature

- Four flow ranges
- Turbine flow measurement
- IFC converter with 4-20 mA or 0-5 VDC output for flow rate
- 4-20 mA output for temperature and pressure
- Pressures up to 5800 PSI (400 Bar)
- Temperatures up to 300 °F (150 °C)
- Available with SAE or BSPP ports
- Flow accuracy ±1% of reading @ 32 cSt
- Repeatability ±0.2%

The Activa Sensor Array provides flow, temperature and pressure signals in a compact unit that requires only one hydraulic line break. Each sensor transmits an output signal that is easily integrated with PCs, PLCs, recorders or panel displays. Signals can also be transmitted to Flo-tech's F6700/F6750 Series digital displays.

Typical applications include fluid characteristic measurement on test stands, stationary hydraulic system monitoring, feedback for hydraulic system control, advance warning of impending component failure and mobile hydraulic system diagnosis.

# Ultima Sensor Array

Simultaneously Measures Flow, Pressure and Temperature

- · Four flow ranges
- Turbine flow measurement
- Standard magnetic pick-up with frequency output for flow rate
- 4-20 mA output for temperature and pressure
- Pressures up to 5800 PSI (400 Bar)
- Temperatures up to 300 °F (150 °C)
- Available with SAE or BSPP ports
- Flow accuracy ±1% of full scale
- Repeatability ±0.2%

The Ultima Sensor Array provides flow, temperature and pressure signals in a compact unit that requires only one hydraulic line break. The magnetic pick-up generates a frequency output for flow rate measurement while the pressure and temperature sensors provide 4-20 mA output signals. The flow signals can be transmitted to Flo-tech's F6600/F6650 Series, and the temperature and pressure signals can be transmitted to the F6700/F6750 Series digital displays or any other instruments that accept a frequency or 4-20 mA signal.

Typical applications include fluid characteristic measurement on test stands, stationary hydraulic system monitoring, feedback for hydraulic system control, advance warning of impending component failure and mobile hydraulics system diagnosis.

# Classic Turbine Flow Sensor

# Measures Flow Rate Providing Frequency or Analog Output

- · Choice of high strength aluminum or Stressproof<sup>®</sup> steel bodies
- Turbine flow measurement
- Flow accuracy ±1% of full scale
- Repeatability ±0.2%
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Optional IFC converter provides analog output

Flo-tech's Classic Turbine Flow Sensors measure the flow rate of hydraulic fluids and other compatible liquids. Offered in a choice of high strength anodized aluminum or Stressproof<sup>®</sup> steel bodies, these durable flow sensors are capable of withstanding pressures up to 6000 PSI (414 Bar).

The Classic Series with the standard magnetic pick-up provides a frequency signal that is proportional to flow rate and can be transmitted to Flo-tech's F6600/F6650 Series digital displays. If an analog output is preferred, these sensors are also available with the IFC (Intelligent Frequency Converter) which offers either a 4-20 mA or 0-5 VDC output signal, allowing easy integration with Flo-tech's F6700/F6750 Series digital displays, PCs, PLCs or other data acquisition devices.

# **Quad Series Turbine Flow Sensor**

Provides Bi-directional Flow Rate Measurement

- Four flow ranges
- Bi-directional turbine flow measurement
- High strength aluminum bodies
- Flow accuracy ±1% of full scale for both forward and reverse flow
- Repeatability ±0.2%
- Pressures up to 5000 PSI (345 Bar)
- Temperatures up to 300 °F (150 °C)

Derived from the FSC Series, the F2000 Quad Series of flow sensors utilizes two flow transducers which are 90-degrees electrically out of phase from each other. With the addition of a second flow transducer, it is possible to monitor flow in both directions. The F2000 Quad is suitable for up-down counters that can discern the leading and trailing edges of the quadrature signals.

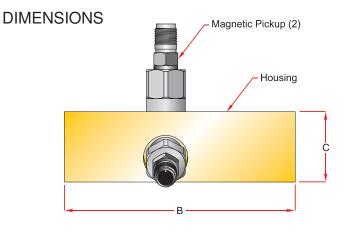

Current applications include using the F2000 as a speed-sensing device on mobile equipment. This bi-directional flow sensor can be used as a governor, sending frequency signals back to a PLC which enable it to make the necessary adjustments. Other functions of the flow sensor are in linear applications where accurate positioning is required.

# DIMENSIONS - Inches (mm)

.20 (5.0) DIA Mounting Holes (4 Places)

- Pre-amplifier for low level turbine meter
- Interface for pulse output devices to PLC, RTU, PC data acquisition card or similar devices
- · Scale turbine meter output to desired engineering units
- · On board microcontroller
- Internal or external pull-up resistor
- · Compact ABS enclosure with mounting flanges
- · Field adjustable (with optional software)
- K-factor range 1- 999,999,999

The K-Factor Scaler is a field adjustable frequency divider that converts the low level frequency output from a turbine meter into a scaled square wave output signal. This amplified, square wave output signal will interface with any frequency or counter input data collection device.

Due to the low level frequency signal of the FSC-375 and the Ultima F6202-F and F6222-F series turbine meters, the K-Factor Scaler is required to amplify the signal of these turbine meters for transmission to the Flo-tech F6600 and F6650 Series digital displays.

The K-Factor Scaler is also capable of converting the frequency output of a turbine meter into a different frequency, representing another unit of measure, such as liters, barrels, cubic feet, etc. This requires the optional programming software kit and the K-factor information unique to the turbine meter.

# **Temperature Sensor F6310 Series** With 4-20 mA Output

- · RTD temperature element
- 4-20 mA electrical output
- Temperatures up to +350 °F (+176 °C)
- Withstands pressures up to 6000 PSI (414 Bar)

These two-wire platinum RTD (resistance temperature detector) sensors with 4-20 mA output are designed for direct insertion into high pressure fluid systems without need for special pressure fittings. They are ideal for indicating system operating conditions, temperature testing and process measurements and control.

# **DIMENSIONS** - Inches (mm)

Combined Celsius / Fahrenheit			Celsius Only		Fahrenheit Only	
Tempe	erature	Accuracy	Temp. Accuracy		Temp.	Accuracy
°C	°F	°C	°C	°C	°F	°F
-20	-4	±0.8	-20	±0.8	-4	±1.4
0	+32	±0.6	0	±0.6	0	±1.2
+100	+212	±1.2	+50	±0.9	+50	±1.2
+176	+350	±1.7	+100	±1.2	+100	±1.5
-	-	-	+150	±1.5	+200	±2.1
-	-	-	+176	±1.7	+300	±2.7
-	-	-	-	-	+350	±3.0

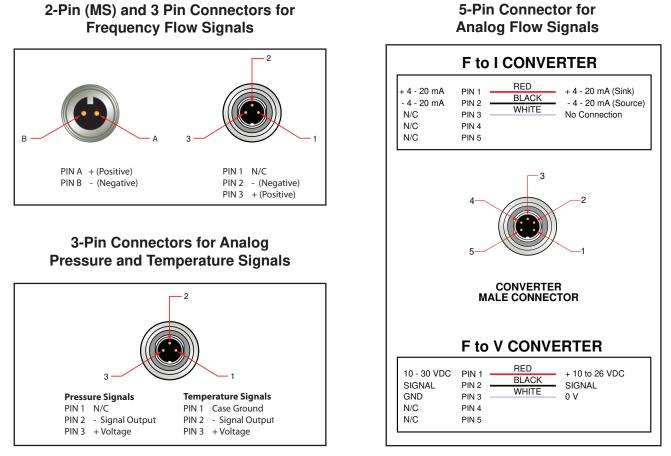

Flo-tech offers a complete selection of mating cables to complete your hydraulic measurement system.

To select the appropriate cable for your application, refer to the Connecting Cable Charts shown below and on the next page.

S	Sensor Model	Connecting Cable	Connecting Ends	Signal Amplifier	Digital Display

# MC4000 Diagnostic Test Equipment

Simultaneously Measures Flow, Pressure, Temperature, and Speed

## **DIMENSIONS** - Inches (mm)

8) G1¼ ports:

8...160 gpm (30...605 lpm)

# ACCESSORIES

A comprehensive set of accessories is available for the MC4000. Use these accessories to expand the capabilities of the MC4000. For a complete list of available accessories see document TUR-PL-00031-EN.

# Hydraulic Formulas and Viscosity Information

Flow Rate Formulas						
Frequency (Hz)	$= \frac{K \times GPM}{60}$	GPM	$= \frac{Hz \times 60}{K}$			
K factor (K)	$= \frac{Hz \times 60}{GPM}$	Time Base (TB)	= $\frac{\text{GPM}}{\text{Hz}}$			
Flow Rate Related F						
Valve C <sub>v</sub> Factor =	$= \frac{\text{Flow Rate (GPM)} \times \sqrt{\text{Flui}}}{\sqrt{\Delta P \text{ across valve}}}$	d Specific Gravity (PSI)				
Cylinder Velocity	= $\frac{0.3208 \times \text{Flow Rate (GP})}{\text{Net Cylinder Area (in^2)}}$	<u>M)</u>				
Fluid Motor Torque	e = Flow Rate (GPM) × Pre Rotational Spe					
Power Calculations						
$H.P. = \frac{GPM \times PS}{1714}$	$H.P. = \frac{LPM}{447}$	$\frac{\times Bar}{7.4}$ kW =	LPM × Bar 600
